

SAFE
MARS
CASH

INTRODUCTION

The **DeFi space has exploded** in the recent months. **Yield Farming, Staking** and **Liquidity Mining** have taken the space by storm, with participants earning by basically "locking" their tokens for a time.

While generally great, these concepts have one downside: impermanent loss (IL). If you are farming/staking and the value of the underlying token changes significantly, even though you still get rewards, the value will far less than if you simply held your tokens

SafeMarsCash is 100% community governed token.

The background is a dark blue space scene. In the top right, the legs and feet of an astronaut in a white suit are visible. In the bottom left, a large, reddish-brown planet (Mars) is partially shown. The space is filled with various celestial bodies: small blue and orange circles representing planets or moons, yellow and pink stars, and white streaks representing comets or meteors. The text is centered in the upper half of the image.

Our first goal is for **SafeMarsCash** to reach 50% of **SafeMars's peak market capitalization**. We are fully committed and determined to make this come to live!

Our Core Team consists of **tech enthusiasts: graphic designers, software engineers, and dedicated marketing specialists** who are all passionate about **defi and cryptocurrency** as a whole.

We believe our **tokenomics are superior** and so is our community.

SafeMarsCash is 100% community driven.

In the bottom right corner, an astronaut in a white suit with orange accents is floating. The astronaut is giving a thumbs-up gesture with their right hand. The astronaut's helmet is white with a black visor. The background around the astronaut is a dark blue space with stars and small orange and blue circles.

The SAFEMARSCASH smart contract applies a **8% fee on all transactions (buys/sells)**. Out of this, **3% is automatically distributed to holders**, without farming! This means the amount of tokens in your wallet will forever increase as people transact. This way IL is avoided altogether and in effect **you get paid for just holding SAFEMARSCASH**.

In addition, the SAFEMARSCASH smart contract also takes **3% of each transaction and automatically adds it to the liquidity pool**. The liquidity pool will continuously increase, which leads to a higher price floor of SAFEMARSCASH.

This is **what SAFEMARSCASH aims** to accomplish:

You don't have to farm, stake or deposit your SAFEMARSCASH

Simply **hold it** in your wallet and **you will get more!**

OVERVIEW

- SAFEMARSCASH is an **autonomous** yield and **liquidity generation protocol** that aims to **directly reward** its holders whilst **concurrently increasing liquidity**.

This is funded by a **8% tax taken** from each and every transaction.

Consequently, the protocol has a permanently **increasing price floor**, with all investors **earning additional SAFEMARSCASH tokens** just for holding, distributed **proportionally** across existing holders.

An illustration of an astronaut in a white suit with orange boots, sitting on a small, orange, cratered planet. The astronaut is holding a small, blue, cratered planet in their hands. The background is a dark blue space with various colorful stars, planets, and nebulae.

REFLECTION

SAFEMARSCASH resides within a **class of token** that **rewards investors just for holding**, the amount of rewards received increases over time the longer an investor holds for.

Holders are also rewarded for the **success of SAFEMARSCASH** with higher transaction volumes leading to increased fees, and **rewards for distribution**. We believe this mechanism provides investors with an active stake in SAFEMARSCASH success!

An illustration of an astronaut in a white suit with orange boots, standing in space. The astronaut is holding a small, orange, cratered planet in their right hand. The background is a dark blue space with various colorful stars, planets, and nebulae.

TOKENECONOMICS

Symbol: SAFEMARSCASH

Total Supply: 1.000.000.000.000.000

TOKEN BURN

Following launch, **53.515% of the total supply** of SAFEMARSCASH was sent to the **black hole address**, permanently **reducing the supply**.

Black Hole Address: 0x00000000000000000000000000000001

As the **black hole address** is classified as a **SAFEMARSCASH holder** it also receives a share of each **transaction fee**. Each share is **burned** leading to a **persistently reducing circulating supply** of SAFEMARSCASH

LIQUIDITY POOL

SAFEMARSCASH was launched with an **initial supply of liquidity** in the form of **BNB/SAFEMARSCASH LP Tokens**. Liquidity was locked for a year.

This was performed to **protect investors** by preventing the possibility of a **rug pull via liquidity removal** for example.

Additional liquidity is **automatically added** to SAFEMARSCASH from the **3% fee** that is **generated from each transaction**. The fee is added to the **liquidity pool** by transforming it into **BNB/SAFEMARS LP Tokens**. The token has a **permanently increasing price floor** in addition to an effectively reducing **circulating** supply of SAFEMARSCASH that are **locked** in the liquidity pool.

Despite being
red, Mars is a
cold planet

LIQUIDITY LOCKING

To ensure that SAFEMARSCASH is **unruggable**, we have **locked** the liquidity for a year.

The logo for SAFETY, featuring the word in a bold, italicized, white sans-serif font. The background of the entire slide is a dark blue space-themed illustration with various celestial elements like stars, planets, and nebulae in shades of blue, purple, and yellow.

We take the safety of holders funds extremely seriously, and therefore we have taken the following measures to protect our community:

**4% Team Wallet
Allocation**

**Contract Audit In
Progress with major
Industry Leader**

**No minting function
present within
the contract**

**SAFEMARSCASH is therefore unruggable, with no
single holder able to mint new tokens, remove
Protocol Generated liquidity.**

ROAD MAP

Q1

- Safe Launch
- website redesign
- white paper
- marketing push
- Listing on coingecko, coinmarketcap, Trust Wallet etc
- smart Contract Audit

Q2

- Setting up charity fund
- Special SafeMarsCash T-shirts and apparel line
- events competitions and community votes
- further partnerships

Q3

- NFT and application development
- listing on top exchanges diversification
- Diversification into more real world use cases
- further ecosystem development

OUR CREW

SAFEMARS is community owned, and the team is made up of a decentralised group of volunteers from all across the world. Access to the team wallet is held solely by the developer.

If you would like to join us please say hello in our channels.
